WELCOME TO OUR SECOND CONSTRUCTION NEWSLETTER

Hello again, and welcome back!

We're pleased to share the second edition of our construction newsletter for the Central Embassy Project (Extension). In this issue, we'll bring you the latest updates on our construction progress, ongoing site activities, and the measures we're taking to minimise impacts on our neighbours, as well as updates on the Soi Somkid Improvement Project, which aims to enhance the surrounding area for the benefit of the local community.

Thank you for being part of our journey. We look forward to keeping you informed as the project progresses!

Construction Newsletter

WHAT'S HAPPENING ON SITE

Take a look at the latest construction progress and key activities at our project site.

Progress as of 14 October 2026:

- Diaphragm Wall: 76 %
- Bored Pile: 32 %
- Overall Progress: 47 %

With overall construction progress now at 47%, we are approaching the halfway mark of D-wall and Piling works. Thank you for your continued support as we move forward with the project!

KEEPING AN EYE ON OUR ENVIRONMENT

We care about our neighbours and the community around us. That's why we've installed **10 real-time monitoring units** to keep an eye on dust, noise, and vibration during construction – 6 units within our project site and another 4 at neighbouring properties.

Our display screen on Ploenchit Road

You can also check the monitoring results! We have 3 display screens around the project where you can see the latest readings.

Prefer checking online?

No problem! You can also view the monitoring results in real time online at our project website, so it's easy to stay up to date with the environmental conditions around our site.

We believe keeping everyone informed is an important part of being a good neighbour!

IMPROVEMENT WORK

Design

CURRENT STATUS:

We're working together to make Soi Somkid a better place for everyone!

This improvement project is a joint effort between **Central and Hongkong Land Co., Ltd., Nai Lert Group, BDMS, and Pathumwan District Office**.

The project will be carried out and supervised by the Pathumwan District Office, and it is currently in the contractor procurement process.

We look forward to seeing the improvements take shape and creating a better environment for the local community.

WHAT'S NEXT

There's more to come! We'll continue making progress on site while keeping an eye on dust, noise, and vibration to help minimise the impact on our neighbours.

For the Soi Somkid Improvement Project, the Pathumwan District Office is currently working on the contractor procurement process. We'll keep you updated as the project moves forward.

Stay tuned for more news and updates in our next newsletter. Thanks for being part of our community!

KNOWLEDGE SHARING

WHAT HAPPENS DURING BORED PILE CONSTRUCTION?

Have you ever wondered what those large piling rigs are doing on our construction site?

Bored piles are deep foundations that help support the weight of a building and transfer the loads safely into the ground. The process involves drilling a deep hole into the ground, installing a steel reinforcement cage, and filling the hole with concrete to form a strong foundation.

Although much of this work takes place underground, it plays a very important role in ensuring the stability and safety of the building above.

It's one of the first important steps in bringing our project to life.
